

Goal-Oriented Production Planning & Control System

A purpose-built system for Production Planning & Control (PPC) that brings you to your desired production goals.

planeus is a generative planning solution that lets you choose and reach the production outcome that meets your target while ensuring its efficiency and profitability by integrating with the systems you are already using.

On-Time Delivery Secured

with instant estimation on completion dates

Production Capacity Maximized

of machines, workers, and other critical resources

Real-time progress Visualized

across all production steps

Cut Operation Costs & Regain Full Productivity

planeus forecasts your future production, so you can bring your current production to your desired outcomes.

Production Time Reduced

by cutting down non-productive time

Business Strategy Aligned

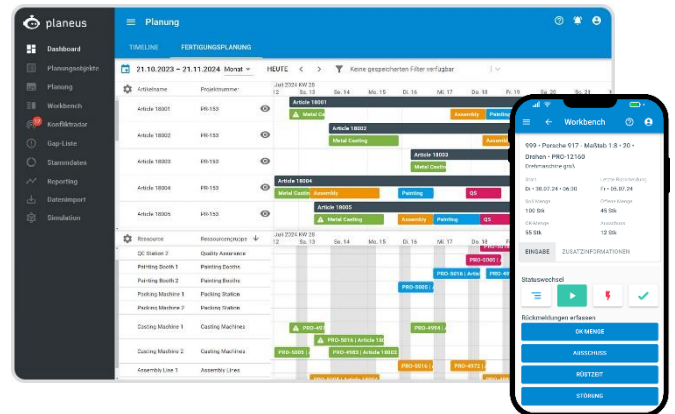

with your existing ERP & MES solutions

Planning Flexibility Increased

by reacting to changes and disruptions

Rethink Your Plan

- Discover your wasted production power
- Make informed decisions that lead you to your goals
- Secure your production with upstream, downstream & non-production processes

Take Back Control

- Coordinate tasks, employees and machines
- Manage all customer orders in one glance
- Schedule orders based on estimated delivery dates and resource availability

Eliminate the Unexpected

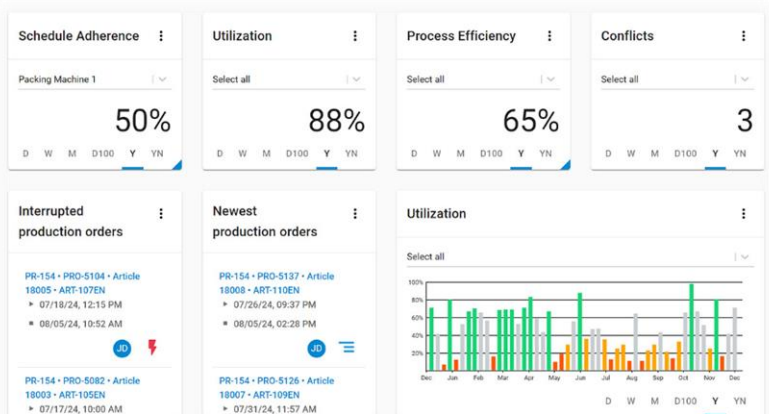

- Instant updates from your shop floor
- Algorithmic conflict detection and aversion
- Future bottleneck detection for every department

Get Things Done Right

- Digital routing slips for paperless productions
- Auto-generated task assignment for individual employees based on the production plan
- Shop Floor UI for real-time progress update

Unveil New Potential

- Re-allocate, add, or reduce resources based on past, estimated and simulated production data.
- Visualize analysis of each production area, machine performance, employee activities, etc.

Manufacturing On-the-Go

All planeus modules are prebuilt with mobile interfaces. As a web-based solution, planeus can run on all devices, sending notifications, alerts and critical updates to users, anytime and anywhere.

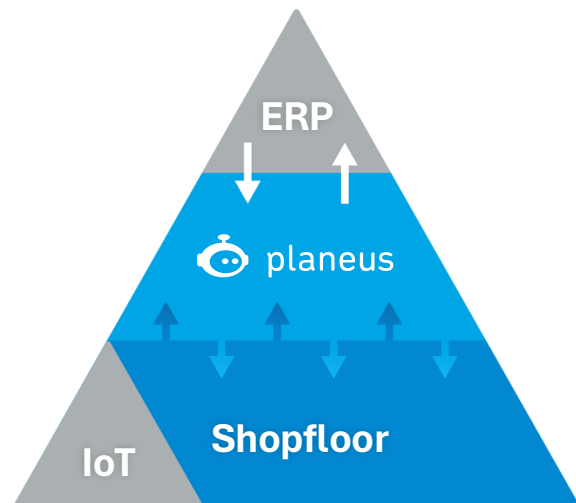

Born Integration-ready

Integrating planeus into any system structure is frustration-free.

planeus is designed to bridge any system and manufacturing platforms with its modular and flexible structure.

Whether it's the order data from ERP systems or IoT data on the shop floor, planeus manages and processes the data for users on all devices.

With over 20 years of experience, our integration experts and customer service teams are here to offer the best solutions you need.

Tailored for All Types of Manufacturing

From pharmaceutical and medical devices manufacturing to automotive prototyping, many manufacturers have already been utilizing planeus to reach their desired production goals:

Who is behind planeus?

planeus is made in Germany by th data GmbH, the expert in digital manufacturing solutions.

Today, the planeus system is provided and supported worldwide by our Customer Service Team as well as our global network of planeus Partners.

planeus now supports English, German, French, Polish, Spanish, Chinese, and Thai, with additional language packs available.

What do we do?

We combine both our decades of experience and enthusiasm in all of our customers' projects.

As a company young in heart, we call for the new way of thinking in manufacturing industry, where future-oriented and human-centric concepts should be the cores of cost-efficient and sustainable productions.
